(54) Title: ELECTRONIC DEVICE FOR STRENGTHENING THE IMMUNE SYSTEM

(57) Abstract: One electronic device proper for strengthening the immune system, produces magnetic fields with characteristics which are determined by a multi channel biomagnetometer. The electronic device is including an alternating current output generated by a microcontroller of symmetric square wave signals with a specific frequency which is regulated by one integrated circuit which receives the frequency value from a keyboard or from a computer through a serial port and an interface integrated circuit and supplies a great number of coils, up to 122, with hemispheric or plane arrangement for the production of symmetric square wave signal of magnetic fields. The electronic device is including also a liquid crystal display and a crystal of high constant oscillation for timing of the system. The strengthening of the immune system is accomplished with the decomposing removal of all placed complex inorganic substances from the glands of the brain with the help of the spiral oscillations of the plasma ions in the blood and this results to energize these glands for better hormone production and activation of the brain.

INTERNATIONAL SEARCH REPORT

International Classification No
PCT/GR 03/00031

A. CLASSIFICATION OF SUBJECT MATTER
IPC 7 A61N2/02

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC 7 A61N

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EP0-Internal, WPI Data

C. DOCUMENTS CONSIDERED TO BE RELEVANT

* Special categories of cited documents :

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "&" document member of the same patent family
